This full-color book will show you how to make your websites more interactive and your interfaces more interesting and intuitive.

THIS BOOK COVERS:

1. **Basic programming concepts** - assuming *no prior knowledge* of programming beyond an ability to create a web page using HTML & CSS
2. **Core elements of the JavaScript language** - so you can learn how to write your own scripts from scratch
3. **jQuery** - which will allow you to simplify the process of writing scripts (this is introduced half-way through the book once you have a solid understanding of JavaScript)
4. **How to recreate techniques you will have seen on other web sites** such as sliders, content filters, form validation, updating content using Ajax, and much more (these examples demonstrate writing your own scripts from scratch and how the theory you have learned is put into practice).

As with our first book (the best-selling **HTML & CSS: Design and Build Websites**), each chapter:

- Breaks subjects down into bite-sized chunks with a new topic on each page
- Contains clear descriptions of syntax, each one demonstrated with inspiring code samples
- Uses diagrams and photography to explain complex concepts in a visual way

By the end of the book, not only will you be able to use the thousands of scripts, JavaScript APIs, and jQuery plugins that are freely available on the web, and be able to customize them - you will also be able to create your own scripts from scratch.

If you're looking to create more enriching web experiences, then this is the book for you.
