Climate Dynamics

Kerry H. Cook

Climate Dynamics Kerry H. Cook

Climate Dynamics is an advanced undergraduate-level textbook that provides an essential foundation in the physical understanding of the earth's climate system. The book assumes no background in atmospheric or ocean sciences and is appropriate for any science or engineering student who has completed two semesters of calculus and one semester of calculus-based physics.

Describing the climate system based on observations of the mean climate state and its variability, the first section of the book introduces the vocabulary of the field, the dependent variables that characterize the climate system, and the typical approaches taken to display these variables. The second section of the book gives a quantitative understanding of the processes that determine the climate state--radiation, heat balances, and the basics of fluid dynamics. Applications for the atmosphere, ocean, and hydrological cycle are developed in the next section, and the last three chapters of the book directly address global climate change. Throughout, the textbook makes connections between mathematics and physics in order to illustrate the usefulness of mathematics, particularly first-year calculus, for predicting changes in the physical world.

Climate change will impact every aspect of life in the coming decades. This book supports and broadens understanding of the dynamics of the climate system by offering a much-needed introduction that is accessible to any science, math, or engineering student.

- Makes a physically based, quantitative understanding of climate change accessible to all science, engineering, and mathematics undergraduates
- Explains how the climate system works and why the climate is changing
- Reinforces, applies, and connects the basic ideas of calculus and physics
- Emphasizes fundamental observations and understanding
- An online illustration package and solutions manual for professors is available

From reader reviews:

Estella Powell:

The book Climate Dynamics can give more knowledge and also the precise product information about everything you want. Why then must we leave the great thing like a book Climate Dynamics? Some of you have a different opinion about book. But one aim which book can give many info for us. It is absolutely proper. Right now, try to closer using your book. Knowledge or facts that you take for that, you may give for each other; you could share all of these. Book Climate Dynamics has simple shape but the truth is know: it has great and big function for you. You can search the enormous world by open and read a e-book. So it is very wonderful.

James Walton:

Book is to be different for each grade. Book for children until eventually adult are different content. To be sure that book is very important for people. The book Climate Dynamics was making you to know about other understanding and of course you can take more information. It is extremely advantages for you. The reserve Climate Dynamics is not only giving you more new information but also being your friend when you truly feel bored. You can spend your own personal spend time to read your book. Try to make relationship with all the book Climate Dynamics. You never sense lose out for everything when you read some books.

Kevin Caputo:

Do you one of people who can't read pleasant if the sentence chained inside the straightway, hold on guys this particular aren't like that. This Climate Dynamics book is readable by simply you who hate the perfect word style. You will find the facts here are arrange for enjoyable examining experience without leaving possibly decrease the knowledge that want to supply to you. The writer of Climate Dynamics content conveys objective easily to understand by a lot of people. The printed and e-book are not different in the information but it just different as it. So , do you even now thinking Climate Dynamics is not loveable to be your top collection reading book?

Dolores Albert:

As a student exactly feel bored to reading. If their teacher inquired them to go to the library or to make summary for some book, they are complained. Just tiny students that has reading's soul or real their hobby. They just do what the professor want, like asked to go to the library. They go to generally there but nothing reading really. Any students feel that reading is not important, boring in addition to can't see colorful photographs on there. Yeah, it is for being complicated. Book is very important for yourself. As we know that on this period of time, many ways to get whatever we really wish for. Likewise word says, ways to reach Chinese's country. Therefore this Climate Dynamics can make you sense more interested to read.
