## **Robotic Industrialization: Automation and Robotic Technologies for Customized Component, Module, and Building Prefabrication** Thomas Bock, Thomas Linner

The Cambridge Handbooks on Construction Robotics series focuses on the implementation of automation and robot technology to renew the construction industry and to arrest its declining productivity. The series is intended to give professionals, researchers, lecturers, and students basic conceptual and technical skills and implementation strategies to manage, research, or teach the implementation of advanced automation and robot-technology-based processes and technologies in construction. Currently, the implementation of modern developments in product structures (modularity and design for manufacturing), organizational strategies (just in time, just in sequence, and pulling production), and informational aspects (computer-aided design/manufacturing or computer-integrated manufacturing) are lagging because of the lack of modern integrated machine technology in construction. The Cambridge Handbooks on Construction Robotics books discuss progress in robot systems theory and demonstrate their integration using real systematic applications and projections for off-site as well as on-site building production. In this volume, concepts, technologies, and developments in the field of building-component manufacturing - based on concrete, brick, wood, and steel as building materials and on large-scale prefabrication, which holds the potential to deliver complex components and products - are introduced and discussed. Building-component manufacturing refers to the transformation of parts and low-level components into higher-level components by highly mechanized, automated, or robot-supported industrial settings. The definitions of components are interpreted differently by different industries and even by individual companies; however, these definitions share a common element, that components are more or less a complex combination of individual preexisting parts and/or lower-level components. Pure building-component manufacturing can be distinguished from the transformation of raw materials into parts (e.g., the production of bricks or simple concrete blocks).

### **From reader reviews:**

#### **Jackie Sneller:**

Nowadays reading books be a little more than want or need but also become a life style. This reading behavior give you lot of advantages. Advantages you got of course the knowledge the particular information inside the book that will improve your knowledge and information. The information you get based on what kind of e-book you read, if you want attract knowledge just go with knowledge books but if you want truly feel happy read one having theme for entertaining for instance comic or novel. The particular Robotic Industrialization: Automation and Robotic Technologies for Customized Component, Module, and Building Prefabrication is kind of e-book which is giving the reader unstable experience.

#### **Donald Perkins:**

Spent a free time and energy to be fun activity to try and do! A lot of people spent their sparetime with their family, or their own friends. Usually they performing activity like watching television, about to beach, or picnic inside the park. They actually doing ditto every week. Do you feel it? Will you something different to fill your personal free time/ holiday? May be reading a book could be option to fill your no cost time/ holiday. The first thing you ask may be what kinds of e-book that you should read. If you want to consider look for book, may be the guide untitled Robotic Industrialization: Automation and Robotic Technologies for Customized Component, Module, and Building Prefabrication can be great book to read. May be it may be best activity to you.

#### **Wendy Poston:**

The book Robotic Industrialization: Automation and Robotic Technologies for Customized Component, Module, and Building Prefabrication has a lot of information on it. So when you read this book you can get a lot of help. The book was compiled by the very famous author. The author makes some research ahead of write this book. This kind of book very easy to read you can find the point easily after perusing this book.

#### **Marjorie Ishee:**

Publication is one of source of expertise. We can add our expertise from it. Not only for students but native or citizen need book to know the update information of year to be able to year. As we know those textbooks have many advantages. Beside most of us add our knowledge, can also bring us to around the world. By book Robotic Industrialization: Automation and Robotic Technologies for Customized Component, Module, and Building Prefabrication we can have more advantage. Don't you to be creative people? For being creative person must like to read a book. Simply choose the best book that appropriate with your aim. Don't become doubt to change your life at this book Robotic Industrialization: Automation and Robotic Technologies for Customized Component, Module, and Building Prefabrication. You can more appealing than now.
