The latest edition of this review of the state-of-the-art in communication technologies is more comprehensive than ever before. The text continues to provide users with the latest information in all areas of telecommunication: electronic mass media, computers, consumer electronics, satellites, and telephony. New chapters for the sixth edition cover print technologies, electronic mail, and personal communication devices, in addition to the comprehensive coverage of two dozen technologies explored in the previous edition. Information on similar technologies has been concentrated into a smaller number of chapters to make it easier to compare history, revenues, technical descriptions, and user information across technologies.

This revision includes a more comprehensive companion home page on the World Wide Web that provides updated information submitted by chapter authors. The Communication Technology Update Home Page (<http://www.tfi.com/ctu/>) also offers links to other Internet resources, as well as a listing of trade organizations and trade publications covering all areas of communication technology.
