Parallel Distributed Processing, Vol. 2: Psychological and Biological Models James L. McClelland, David E. Rumelhart, PDP Research Group

What makes people smarter than computers? These volumes by a pioneering neurocomputing group suggest that the answer lies in the massively parallel architecture of the human mind. They describe a new theory of cognition called connectionism that is challenging the idea of symbolic computation that has traditionally been at the center of debate in theoretical discussions about the mind.

The authors' theory assumes the mind is composed of a great number of elementary units connected in a neural network. Mental processes are interactions between these units which excite and inhibit each other in parallel rather than sequential operations. In this context, knowledge can no longer be thought of as stored in localized structures; instead, it consists of the connections between pairs of units that are distributed throughout the network.

Volume 1 lays the foundations of this exciting theory of parallel distributed processing, while Volume 2 applies it to a number of specific issues in cognitive science and neuroscience, with chapters describing models of aspects of perception, memory, language, and thought.

From reader reviews:

Walter Cornwell:

This book untitled Parallel Distributed Processing, Vol. 2: Psychological and Biological Models to be one of several books this best seller in this year, this is because when you read this reserve you can get a lot of benefit into it. You will easily to buy this particular book in the book shop or you can order it by using online. The publisher of the book sells the e-book too. It makes you easier to read this book, as you can read this book in your Smartphone. So there is no reason to your account to past this publication from your list.

Bill Boyd:

The actual book Parallel Distributed Processing, Vol. 2: Psychological and Biological Models has a lot details on it. So when you read this book you can get a lot of benefit. The book was authored by the very famous author. Mcdougal makes some research prior to write this book. This specific book very easy to read you may get the point easily after perusing this book.

Christina Bishop:

Are you kind of hectic person, only have 10 or even 15 minute in your morning to upgrading your mind expertise or thinking skill also analytical thinking? Then you are having problem with the book in comparison with can satisfy your small amount of time to read it because pretty much everything time you only find reserve that need more time to be examine. Parallel Distributed Processing, Vol. 2: Psychological and Biological Models can be your answer mainly because it can be read by an individual who have those short time problems.

Sam Nielsen:

Within this era which is the greater man or woman or who has ability in doing something more are more important than other. Do you want to become certainly one of it? It is just simple strategy to have that. What you need to do is just spending your time not much but quite enough to enjoy a look at some books. One of many books in the top checklist in your reading list is definitely Parallel Distributed Processing, Vol. 2: Psychological and Biological Models. This book which can be qualified as The Hungry Slopes can get you closer in turning out to be precious person. By looking right up and review this reserve you can get many advantages.
