Experimental Characterization of Advanced Composite Materials, Fourth Edition Leif A. Carlsson, Donald F. Adams, R. Byron Pipes

Over the last three decades, the evolution of techniques for the experimental testing of composite materials has struggled to keep up with the advances and broadening areas of application of the composite materials themselves. In recent years, however, much work has been done to consolidate and better understand the test methods being used. Finally, a consensus regarding the best available methods exists, and definitive recommendations can be made.

Experimental Characterization of Advanced Composite Materials provides a succinct, authoritative treatment of the best available methods for determining the mechanical properties, thermal expansion coefficients, and fracture and strength data for composite materials. With an emphasis firmly on practical matters, it presents processing techniques, specimen preparation, analyses of test methods, test procedures, and data reduction schemes. Five chapters covering specific aspects of lamina testing are followed by discussions extending those principles to laminate responses. The treatment concludes by exploring composite durability issues with a detailed examination of defects and fracture mechanics.

The **Fourth Edition** is revised to include:

- New figures, updated ASTM standards, and an expanded index
- Major additions in processing of thermoset resins, neat resin tests, sandwich structures, cure analyses, damage tolerance tests, single fiber tests, fiber matrix interface tests, interlaminar tension tests, through-thickness tension and compression tests, open-hole compression tests, falling weight impact tests, compression-after-impact tests, sandwich beam and core tests, and more

With its concise format, detailed procedures, and expert assessments, this book is an outstanding resource for composites manufacturing and test engineers, lab technicians, and other industry professionals, as well as students, academia, and government research and engineering organizations. It brings together all of the most appropriate and widely accepted test methods developed to date.

From reader reviews:

Gabriel Cleveland:

As people who live in the actual modest era should be up-date about what going on or information even knowledge to make all of them keep up with the era which is always change and move forward. Some of you maybe will probably update themselves by examining books. It is a good choice in your case but the problems coming to anyone is you don't know which you should start with. This Experimental Characterization of Advanced Composite Materials, Fourth Edition is our recommendation to make you keep up with the world. Why, because book serves what you want and need in this era.

Connie Deroche:

The knowledge that you get from Experimental Characterization of Advanced Composite Materials, Fourth Edition may be the more deep you searching the information that hide into the words the more you get serious about reading it. It doesn't mean that this book is hard to understand but Experimental Characterization of Advanced Composite Materials, Fourth Edition giving you enjoyment feeling of reading. The writer conveys their point in certain way that can be understood by simply anyone who read it because the author of this book is well-known enough. This book also makes your current vocabulary increase well. Therefore it is easy to understand then can go to you, both in printed or e-book style are available. We highly recommend you for having that Experimental Characterization of Advanced Composite Materials, Fourth Edition instantly.

Cari Sexton:

People live in this new day of lifestyle always aim to and must have the time or they will get great deal of stress from both lifestyle and work. So , if we ask do people have extra time, we will say absolutely sure. People is human not only a robot. Then we ask again, what kind of activity are there when the spare time coming to a person of course your answer can unlimited right. Then do you try this one, reading textbooks. It can be your alternative within spending your spare time, often the book you have read will be Experimental Characterization of Advanced Composite Materials, Fourth Edition.

Ruth Westlund:

Is it anyone who having spare time then spend it whole day simply by watching television programs or just laying on the bed? Do you need something new? This Experimental Characterization of Advanced Composite Materials, Fourth Edition can be the respond to, oh how comes? A book you know. You are consequently out of date, spending your extra time by reading in this brand-new era is common not a nerd activity. So what these publications have than the others?
